

# AP Computer Science A

Tip Calculator Project

# Tip Calculator Project

A bit of a review of Unit 1, and a preview of Units 2 and 3!

# Tip Calculator

- 10 points major assessment, due start of class next Friday
- Everyone should submit their own version of the project, but you are encouraged to talk and work together, comparing code and helping each other get it right! **Programming is a collaborative sport!**
- It's mostly a review of Unit 1, but you will be learning a couple of new things that are a preview of Units 2 and 3 that you and your partner will have to figure out 🧐
- First thing, before you even look at the project, close the project from the Do Now, and begin a new IntelliJ project: **LastNameTipCalculator**

# Review Project

- Take 5 minutes to preview the task
- What questions do you have?
- Get started with the initial plan! Document your ideas in Step 1, then discuss with your partner in Step 2 -- *capture their feedback **before** you start coding!*
- When you are ready to start hacking at it, begin! You have the rest of class today and next class to work on it.

HAVE FUN! 🤖
