```java
import java.util.Scanner;

public class Main
{
    public static void main(String[] args)
    {
        Scanner scan = new Scanner(System.in);

        System.out.print("Please enter your name: ");
        String name = scan.nextLine();

        System.out.print("How many apples? ");
        int apples = scan.nextInt();
        scan.nextLine(); // clear the input buffer after using nextInt

        System.out.print("Price per apple? ");
        double cost = scan.nextDouble();
        scan.nextLine(); // clear the input buffer after using nextDouble

        double totalCost = apples * cost;

        System.out.println(name + " has " + apples + " apples that cost " + cost + " each.");
        System.out.println("The total cost is $" + totalCost);
    }
}
```
