Restaurant Tip Calculator Project

10 points Major Assessment
Due by the start of the period on **XX**

Self-score below:	SCORING RUBRIC (1 point each)	Kaufman's Scores
	Initial written plan is complete and my partner has provided feedback on that plan.	
	Program welcomes the user.	
	Program asks for the number of guests and tip percentage (both as whole numbers).	
	A Scanner object is created and correct methods are used to obtain all user input.	
	User is prompted to enter costs in dollars and cents, and can do so repeatedly until -1 is entered.	
	After the user enters the last cost, the program prints out all the required values.	
	Decimals are formatted with 2 decimal places using a DecimalFormat object.	
	Variables are appropriately used, are named using proper conventions, and are of appropriate data types.	
	Code is properly indented *and* multiple comments are added to indicate what significant parts of the program does.	
	Partner has tested my program and provided a suggestion, which I captured in the above and either incorporated or not (with explanation).	
	TOTAL (out of 10)
